

Hyperion System 9 BI+ Analytic Integration Connector For SAP BW

Gain quick, easy, “no coding” access to information in SAP® NetWeaver™ BI (formerly SAP BW) for creating analytic applications in *Hyperion® System™ 9* that help set goals, model scenarios, and plan resource allocations.

Highlights

- Gain quick snapshots of SAP NetWeaver BI data and metadata for use with *Hyperion System 9 BI+ Essbase Analytics™* and *Hyperion System 9 BI+ Enterprise Analytics™*
- Complement SAP implementations with seamless connectivity to SAP NetWeaver BI
- Deploy rapidly with an easy-to-use, code-free, graphical design environment
- Drill through to details in SAP NetWeaver BI

Create Essbase Analytics and Enterprise Analytics applications with data from SAP NetWeaver BI

Key Benefits And Features

Powerful engine

Hyperion System 9 BI+™ Analytic Integration Connector for SAP BW™ (Analytic Integration Connector for SAP BW) provides a sophisticated engine that delivers high-performance extraction from SAP NetWeaver BI using SAP BAPI function calls, the industry-preferred method for retrieving data from SAP NetWeaver BI. With a simple mouse click, the *Analytic Integration Connector for SAP BW* easily connects with SAP NetWeaver BI for fast access and nearly instantaneous response to end-user requests.

End-to-end processing

Users can easily access SAP NetWeaver BI to create applications within *Hyperion System 9 BI+ Essbase Analytics (Essbase Analytics)* and *Hyperion System 9 BI+ Enterprise Analytics (Enterprise Analytics)*. First users browse and select the desired SAP NetWeaver BI QueryCubes and InfoCubes, then the related data and metadata from the selected SAP objects are imported into *Hyperion System 9 BI+ Analytic Integration Services™* to generate *Essbase Analytics* and *Enterprise Analytics* meta-outlines—for populating the analytic applications.

Complexity of underlying SAP APIs is hidden

Analytic Integration Connector for SAP BW accesses data and metadata from SAP NetWeaver BI without requiring the user to perform any coding and automatically generates the necessary SAP BAPI calls for information retrieval.

Centralized metadata repository

The centralized repository stores common data mappings, dimensions, hierarchies, calculation logic, and more. Users can quickly develop tailored business performance management solutions from SAP data.

Easy administration

Analytic Integration Connector for SAP BW makes administration easy. It provides highly intuitive graphical design environments, along with reusable objects and services. This saves time and money and frees users to focus on other higher-value tasks.

Drill through to details

Analytic Integration Connector for SAP BW supports drill through to detailed data residing within SAP NetWeaver BI using SAP BAPIs for optimized performance and maximum scalability. This enables the loading of the appropriate level of summary data within *Essbase Analytics* and *Enterprise Analytics*, while keeping more detailed data within SAP NetWeaver BI.

Flexibility in hierarchy creation

Analytic Integration Connector for SAP BW enables users to create additional hierarchies within *Essbase Analytics* and *Enterprise Analytics* that were not originally found within SAP NetWeaver BI. This saves time and effort because users do not need to first create these hierarchies within SAP NetWeaver BI before importing the metadata.

Hyperion consulting, education, and support services

From implementation to training to technical support, Hyperion professionals work together to transform your software into powerful solutions that support your decision making and drive superior business performance. We offer everything you need to help your organization achieve its performance goals. Visit www.hyperion.com/services for more information.

Learn more

Hyperion System 9 BI+, with SAP-certified integration, delivers powerful capabilities to complement and extend your SAP implementation. Hyperion is recognized by industry analysts as providing one of the most comprehensive, easy-to-deploy, user-friendly business intelligence solutions. For more information, please visit www.hyperion.com/sap.
